

VILLAGE GREEN SEED

GREAT SEED . . . GREAT RESULTS

Features

Dark green colour

Quick germination

Very good density

Natural heat and drought
"intolerance"

Benefits

Excellent winter
overseeding option

Attractive dark green
surface

Naturally transitions out
of warm season grasses
in hot conditions

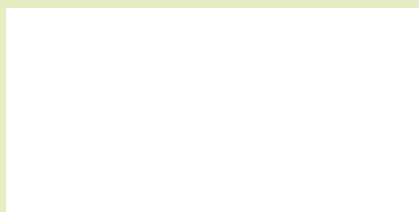

Seeding rates (bare ground)

30-50g per sqm

3-5kg per 100 sqm

300-500kg per Ha

Distributed by:

CARAVELLE

Winter Overseeding Ryegrass

Caravelle is a proven performer in winter overseeding of warm season grasses such as Couch and Kikuyu.

Caravelle is unique for this use as it is a perennial ryegrass and not a transitional rye or annual rye which are often used.

That means you get a fast germination but more importantly an attractive dark green grass that will give you an excellent surface during the winter months as opposed to some of the "transitional" types which germinate quickly but are not particularly high turf quality and do not mow as well.

Caravelle is not heat or drought tolerant and will naturally start to transition out of your warm season grass when temperatures remain above 20°C.
