

VILLAGE GREEN SEED

GREAT SEED . . . GREAT RESULTS

Features

Mid-dark green colour

Dense growth habit

High endophyte

Strong winter growth

Benefits

Winter performance

Cold weather germination

Excellent wear tolerance

Non-stemmy growth habit

Insect resistance

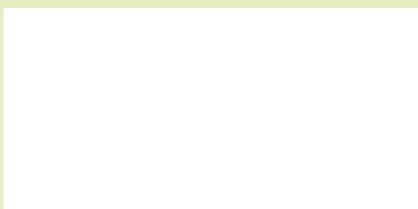

Seeding rates (bare ground)

30-50g per sqm

3-5kg per 100 sqm

300-500kg per Ha

Distributed by:

VERVE

Turf Ryegrass

Verve Turf Ryegrass was bred in NZ specifically for use in winter sports fields.

With rapid germination and establishment coupled with very good wear tolerance **Verve** is a natural choice in high use situations.

Verve has very good cold weather germination so it can be used in winter top up seeding.

Verve is mid-dark green in colour and can also be used in more ornamental situations such as lawns, passive parks and golf fairways.

Verve has high endophyte for natural resistance to insect damage.

Verve can also be blended with other turf ryegrasses to add vigour and winter performance to enhance your existing seed varieties.

Verve is not "stemmy" in its growth characteristics so will keep its looks under a close mowing regime.

Verve is an all year round performer.

Verve excellent winter performance
