

Jetty hard fescue was ranked highest in the NTEP for shade tolerance and can handle growing under dense tree canopies. Unlike other hard fescues, Jetty can withstand low mowings, working well in low maintenance areas or golf courses that need to be mowed low. Jetty has a very dark green color, classifying it as one of the darkest hard fescues available. In addition, Jetty has excellent disease resistance. As with all fine fescues, Jetty is highly drought tolerant.

UNPARALLELED SHADE TOLERANCE

WITHSTANDS LOW MOWING

DARK GREEN

DISEASE RESISTANCE

HIGHLY DROUGHT TOLERANT

AREAS OF USE

- Golf Course Roughs
- Low Maintenance Areas
Around Trees
- Slopes & Hillsides

NTEP DATA

Variety	Turfgrass Vigor	Leaf Spot	Dollar Spot
Jetty	5.3	7.9	8.3
Beacon	5.0	7.9	8.3
Minimus	4.7	8.3	8.0
Sword	3.7	7.9	8.2
Quattro	2.7	6.6	8.2
Bleudin	2.0	6.6	5.8
LSD	1.4	0.8	0.7

2015 NTEP Data, All Mean Data Used. Turfgrass Quality and Other Ratings 1-9; 9=Best

SEEDING

Broadcast seed at 3-5 lbs. per 1,000 sq. ft. for most applications. Erosion control and reclamation areas and ski slopes should be seeded at 150-200 lbs. per acre depending on the turf density desired. Seed golf course roughs at 200 lbs. per acre.

MAINTENANCE

Jetty quickly establishes over a broad range of growing and environmental conditions in most soils, particularly when initial irrigation is available. On sensitive areas and slopes, levels of maintenance can be minimal with no fertilization and one mowing per season. In other turf areas, whether used alone or in combination with other grasses, maintain a stand at 1.5" to 3" in height. A starter type fertilizer, applied at time of seeding, will greatly enhance establishment and "fill-in".
