

VILLAGE GREEN SEED

GREAT SEED . . . GREAT RESULTS

Features

Retains colour

Quick germination

Very good density

Good heat and drought tolerance

Benefits

Mows well.

Attractive in un-mown areas.

Extensive tillering

Great in blends

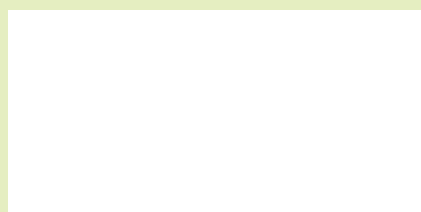

Seeding rates (bare ground)

30-50g per sqm

3-5kg per 100 sqm

300-500kg per Ha

Distributed by:

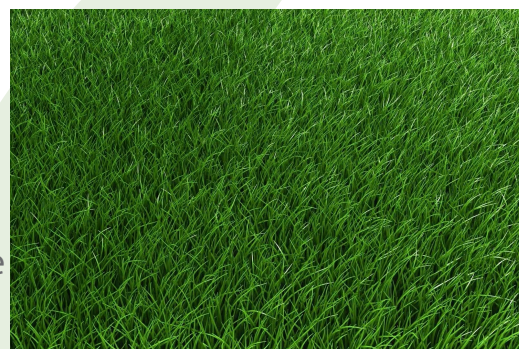

VG1000

Chewings Fescue

VG1000 chewings fescue (*Festuca rubra* sp. *commutata*) has a rich green color, fine leaf texture and with extensive tillering, resulting in a dense turf sward. Ideal to blend with Creeping Red Fescue for greater characteristic diversity.

VG1000 is recommended for home lawns, parks, corporate landscapes and golf course roughs and out-of-play areas. Well adapted to sandy, infertile and dry soils,

VG1000 is an excellent choice on areas where regular maintenance is not possible, such as embankments, deep roughs, and roadsides.

Under non-mown conditions, **VG1000** will put up seedheads during the summer adding to the contours of your landscape.

VG1000 is a good choice alone or in mixtures and blends matched with other Village Green grasses.

VG1000 performs well at different maintenance regimes -- high, medium, and low input and is adapted to mowing heights from 3.75 to 7.5 cm.

VG1000 tolerates soil pH from 4.5 to 8.0.
